

Course Title:

Safety In The Laboratory

Course Description:

Provides general introductory knowledge in respect to specific topics that are important in laboratory environments. Covers chemical reactions, poisons and carcinogens, toxic substances, spillages, protective equipment, material data safety sheets, Hazchem codes for hazardous chemicals, fire and other relevant topics.

Course Aims:

- i. To raise the participants awareness in regards to the potential hazards associated with working in laboratory environments.
- ii. Instil in people the need to stop and think about what they are doing in the workplace environment. This will then reduce the risk associated with a potential hazard becoming a real hazard.

Makes staff more aware of the potential hazards involved with chemicals

Starfare Images training division started in 1997 in response to an industry need to provide cost effective training personnel. In consultation with industry Starfare Images has designed and developed a range of courses to enhance the essential skills of employees. A natural progression for the training division was online training which now includes the Safety In The Laboratory course.

Every laboratory is different, however the basics in regards to safety are fairly uniform across the scientific/technical spectrum. The courses are designed for participants to learn at their own pace and there are a number of self-assessment slides to reinforce important criteria as you progress through a topic.

The topics are broken down into self-assessable sections that need to be completed before you can move to the next section. At the end of the course you will be required to undertake a final assessment task where you will need to obtain a score of 85% or more to complete the course. Once this is done the system will automatically provide you with a certificate of course completion.

Online Courses

by Starfare Images

BENEFITS OF TRAINING ONLINE

For online training to be successful there needs to be benefits.

Benefits of our online training program include:

Travel: No travel costs for participants.

Fees: Low course fees because there is no facility rental or dedicated instructor.

Flexibility: Participants can learn on-site or in the comfort of their own home.

Self-paced: The participant sets the pace at which they wish to learn. You can work through the course in one session or you can break the course down into a number of short sessions at your convenience. The online training program allows you to log off from the course and return to the slide that you were up to at a more convenient time.

Self-assessable: Topics are broken down into sections of up to ten slides with a self-assessment slide at the end of each section. This is used to assess your comprehension of the section content. You cannot progress to the next section until you have passed the self-assessment slide. Do not worry. We will not try to trick you; the questions are simply designed to reinforce important issues within the section.

Certificate: You received a certificate within minutes once you have successfully completed the course.

COURSE TOPICS

- Introduction, Documentation And Legislation
- Working With Chemicals In The Workplace
- How Chemicals Can Harm Us
- Classification And Usage Of Chemicals
